BANDAS CON GRABADOS Y BANDAS NERVADAS / BELTS WITH TEXTIL IMPRESSIONS AND CHEVRON BELTS

Existen diferentes tipos de acabados que se pueden aplicar a las coberturas de una banda transportadora / There are different types of finishings that can be applied to the covers of a conveyor belt.

Se considerarán 2 tipos principales de acabados / 2 types of finishings will be considered:

- 1.-IMPRESION TEXTIL / TEXTIL IMPRESSION
 - BANDA RUGOSA / Grip Top Belt
 - BANDA ROUND BALER / Round Baler Belt
- 2.-BANDA NERVADA / CHEVRON BELT

IMPRESION TEXTIL / TEXTIL IMPRESSION

BANDA RUGOSA / GRIP TOP BELT

Bandas con un recubrimiento superior con una textura rugosa. Esta evita que el material se deslice por la banda / These belts have a rough textured top cover. This prevents material from sliding on the belt.

Especialmente indicadas para el transporte de paquetería y sacos en entornos inclinados / Particularly suitable for inclined belting of parcels and sacks.

BANDA ROUND BALER / ROUND BALER BELT

Las bandas Belstiflex® Round Baler son el último desarrollo dentro de nuestra gama de producto para el sector agrario. Estas bandas son producidas bajo las demandas de los clientes más exigentes y son perfectamente adaptables a los diseños de rotoempacadoras de los principales fabricantes del sector / The Beltsiflex® conveyor belts are the latest development inside of our product range of the agricultural sector. These conveyor belts are produced under the highest customer's demands and they can be adjusted to the main Round Baler machine designs.

Su especial combinación de tejidos de alta resistencia en polyester, nylon y aramida, junto con unos cauchos técnicos altamente especializados, otorgan al conjunto un excelente rendimiento y vida útil ante impactos, así como, un lento envejecimiento ante la degradación propia producida por la presencia de humedad / Its special combination of high tensile strength fabric in polyester, nylon and aramid together with the top performance rubbers, give the product set their great properties, long self-life against impacts. The moisture ageing it is also well controlled thanks to the raw materials included.

CARCASA / Carcass	CARA SUPERIOR / Superior Face	CARA INFERIOR / Bottom face
3 tipos / 3 types: RB 400/2 RB 400/3 RB 500/3	4 tipos / 4 types: G125 G315 Grip Top Diamond	2 tipos / 2 types: G125 G315

Principales ventajas / Main advantages:

-Producto idóneo para el manejo de paja, heno y hierba con alto índice de humedad / Suitable product to manage straw, hay and grass balers with a high moisture index.

-Excelente durabilidad / Excellent durability

-Gran resistencia al impacto y al desgarró / Great impact and tear resistance.

-Excelente carga de rotura y rigidez transversal / Excellent breaking load and transversal stiffness.

-Ancho de producto variable para adaptarse a necesidades de cliente / Variable product width in order to adjust it to the customer or machine demand.

BANDA NERVADA / CHEVRON BELT

Bandas aconsejadas para el transporte de material en planos inclinados. Dependiendo de la naturaleza del producto, y el tipo de banda elegida pueden llegar a transportar el material con 45° de inclinación. Ofrecemos una amplísima gama de nervadura dividida en siete tipos principales en función de la altura. Nervios de 15 mm., 20 mm., de 25 mm., de 30 mm., de 32 mm., de 35 mm. y de 50mm.

Belts recommended for conveying material on sloping surfaces. Depending on the nature of the product and the type of belt chosen, they can convey material with an inclination of 45. We offer a very wide range of chevrons divided into seven main types depending on the height. 15 mm, 20 mm, 25 mm, 30 mm, 32 mm, 35 mm and 50 mm ribs.

Los anchos varían dependiendo el tipo de nervaduras ofreciendo una gama desde 250 mm. hasta un máximo de 4.400 mm. (Consultar para anchos mayores). / Widths vary depending on the type of chevron, with a range from 250 mm to a maximum of 4.400 mm. (ask about larger widths).

Ejemplo de denominación de una banda nervada / Example of chevron belt denomination:

KAS-15/585 800 EP400/3 3+1,5 Y cc

“KAS”: Las 3 primeras letras representan el tipo de nervio / The first 3 letters represent the type of chevron.

“15”: Los 2 números siguientes indican la altura de nervio en milímetros / The next 2 numbers indicate the rib height in millimetres.

“585”: Los siguientes dígitos hacen referencia a la anchura total del nervio en milímetros / The next digits refer to the total rib width in millimetres.

A continuación se añade la referencia de la banda base, en este caso una banda de ancho 800 mm. / The reference of the base belt is added next, in this case a belt with a width of 800 mm.

Las bandas nervadas se pueden clasificar en 2 grupos / Chevron belts can be classified in 2 groups:
